VULNERABILITY ASSESSMENT SERVICES

PROACTIVELY MITIGATE RISKS WITH KHIPU'S MANAGED VULNERABILITY ASSESSMENT SERVICES

In an ever-evolving threat landscape, identifying and managing vulnerabilities within your network is a critical component of a robust cybersecurity strategy. However, many organisations face challenges such as limited resources, inefficient tools, high operational costs, and stringent compliance requirements. These obstacles often result in incomplete vulnerability coverage, false positives, and increased exposure to cyber threats.

KHIPU's Managed Vulnerability Scanning Service is designed to address these challenges head-on, enabling organisations to identify, prioritise, and remediate vulnerabilities effectively while reducing the operational burden on in-house teams.

WHY VULNERABILITY ASSESSMENT SERVICES SHOULD MATTER TO YOU...

Vulnerability scanning involves the systematic examination of your network's computers, devices, and applications to identify security weaknesses that could be exploited by attackers. Using advanced software tools, the process compares collected information against a database of known vulnerabilities, ensuring early detection of potential risks.

KEY VULNERABILITIES IDENTIFIED

- **Weak network configuration settings**
- **Insecure user passwords**
- **Outdated software and applications**
- **Denial of service vulnerabilities**

KHIPU VULNERABILITY ASSESSMENTS... SOLUTION OVERVIEW & BENEFITS

KHIPU's Managed Vulnerability Assessment Service leverages the latest scanning technologies and the expertise of seasoned cybersecurity professionals to deliver comprehensive visibility into your network's vulnerabilities. By combining cutting-edge tools with human insight, we provide accurate, context-rich analysis and prioritised remediation guidance to help you stay ahead of potential threats.

BESPOKE APPROACH

Our service supports a wide range of vulnerability scanning tools, ensuring we tailor the solution to your organisation's specific needs and threat landscape. Whether you require an on-premises or cloud-based deployment, KHIPU's experts ensure the solution aligns with your operational requirements.

EXPERT SUPPORT

Delivered by our UK-based Security Operations Centre (SOC), our team of analysts and engineers handles the deployment, configuration, and continuous monitoring of your vulnerability scanning solution. We also offer hosted services through our secure datacentre, minimising the impact on your internal resources.

ACTIONABLE REPORTING

After each scan, KHIPU provides detailed, easy-to-understand reports that prioritise vulnerabilities based on severity and business impact. Our actionable remediation guidance empowers your team to address issues effectively and efficiently.

ENHANCED CYBER HYGIENE

Regular vulnerability scanning helps ensure your organisation remains resilient against attackers who exploit known weaknesses. By proactively identifying and addressing vulnerabilities, you reduce the risk of cyberattacks and minimise potential operational disruptions.

STRATEGIC SECURITY INSIGHTS

In addition to identifying and remediating vulnerabilities, our experts provide strategic guidance to help shape your long-term cybersecurity investments and strategies. By working closely with your in-house team, we help you align security processes with your organisation's evolving needs.

SUPPORT FOR COMPLIANCE REQUIREMENTS

KHIPU's service ensures alignment with the latest industry standards and regulations, simplifying compliance processes and demonstrating your organisation's commitment to maintaining a secure environment.

EMPOWER IN-HOUSE TEAMS

Managing vulnerability scans and analysing their results can be resource-intensive. Our fully managed service alleviates this burden, allowing your internal teams to focus on remediating vulnerabilities rather than discovering them.
