

Educational institutions continue to be prime targets for ransomware attacks, in part because of the sheer size of their environments and many of them not having out of hours IT support capabilities.

Backups are one of the most, if not the most, important defences against ransomware, but if subject to corruption, attackers will use it against you. With inadequate security systems in place, organisations can be easy to penetrate leaving sensitive data exposed. This is not the case for this UK College (who wish to remain anonymous), who recently with the support of cyber security experts KHIPU networks, implemented Rubrik’s backup and recovery solution to boost their cyber resiliency and ransomware protection.

The biggest pain for most ransomware victims is recovery. Frequently, organisations rely on complex, multi-step restores that are often error prone and inefficient, ultimately leading to more downtime. The longer a recovery takes, the more impact the attack has on revenue, staff and student productivity, and reputational damage. This is true for any security incident—whether it’s ransomware, an insider breach, or rogue employee.

“Rubrik gives us a strong backup and recovery solution ensuring we can recover reliably and quickly from a ransomware attack. Keeping our students learning and our data protected” - Director of IT Services

About KHIPU

KHIPU is a specialist provider of Networks, Wi-Fi and Cyber Security solutions. We enable organisations of any size to proactively secure their mission critical environment whilst minimising disruption to user productivity.

About Rubrik

Rubrik helps enterprises achieve data control to drive business resiliency, cloud mobility, and regulatory compliance. We are trusted by the world’s leading companies and industry-leading partners.

“Selecting a partner to work with you on your cyber security is no simple matter. This partnership must last for years. In the end, its not about products or services, it comes down to trust. KHIPU and the Royal Household have been in partnership for over 10 years, they hold a Royal Warrant in recognition of their service. We trust KHIPU, it’s as simple as that”

Pete Smith, Director of IT & Telecommunications,
The Royal Household.
